Title: Identify the system calls to copy the content of one file to another and illustrate the same using C program.

SOURCE CODE:

```
#include <stdio.h>
#include <fcntl.h>
#include <unistd.h>

int main()
{
  int source, destination;
  char buffer[100];
  int bytes;

  source = open("source.txt", O_RDONLY);
  destination = open("destination.txt", O_WRONLY|O_CREAT
                                    |O_TRUNC, 0644);
  if (source < 0 || destination < 0)
  { printf("Error opening file\n");
    return 1;
  }
  while ((bytes = read(source, buffer, sizeof(buffer))
                                    > 0)
  {
    write (destination, buffer, bytes);
  }
  close (source);
  close (destination);
```

```
    printf("File content copied successfully.\n");
    return 0;
}
```

Sample Output:

contents of source.txt:

Hello, this is a sample file
This content will be copied.

Terminal Output:

File content copied successfully.

Contents of destination.txt after execution:

Hello, this is a sample file
This content will be copied.
