EX 5

Name: P V Giridhar
Reg NO: 1972260022

Title:

Construct a scheduling program in C that selects the waiting process with the highest priority to execute next.

SOURCE CODE:

```
#include <stdio.h>
int main() {
   int n,i,j,b[10],p[10],w[10],x;
   float a=0,t=0;
   scanf("%d",&n)
} for(i=0;i<n;i++)
      for(j=i+1;j<n;j++)
         if(w[i]<>w[j]){
            x=w[i];w[i]=w[j];w[j]=x;
            x=b[i];b[i]=b[j];b[j]=x;
            x=p[i];p[i]=p[j];p[j]=x;
         }
for(i=0;i<n;i++){
   x=0;
   for(j=0;j<i;j++) x+=b[j];
   a+=x;t+=x+b[i];
   printf("p%d %d %d %d\n",p[i],b[i],x,
                                x+b[i]);
   }
   printf("Avg WT=%.2f\nAvg TAT=%.2f",a/
n,t/n);
}
```

Sample Output :

P_2	3	0	3
P_1	5	3	8
P_3	8	8	16

Avg WT = 3.67

Avg TAT = 9.00
