Title : C Program to simulate Round Robin Scheduling Algorithm.

SOURCE CODE:

```
#include <stdio.h>
int main(){
    int n,b[10],a[10],q,i,t=0;
    printf("Enter n and quantum : ");
    scanf("%d%d",&n,&q);
    for(i=0;i<n,i++){
        printf("Burst P%d:",i+1);
        scanf("%d",&b[i])
        a[i]=b[i];
    }
    while(1){
        int done=1;
        for(i=0;i<n;i++)
            if(a[i]>0){
                done=0;
                if(a[i]>q){
                    t+=q; a[i]-=q;
                }else{
                    t+=a[i]; a[i]=0;
                    printf("P%d completes at
%d\n",i+1,t);}
            }
        if(done)break;
    }
    return 0;
}
```

Output :

Enter n and quantum : 3 2
Burst P_1 : 5
Burst P2 : 3
Burst P3 : 1
P3 Completes at 5
P2 Completes at 8
P_1 Completes at 9
